ENGAGEMENT MODEL

- Open to project-based work, contract employment, turnkey backend development, and support of existing systems.
- Open to cooperation with Russian and international clients.

KEY PROFILE

- Over 15 years of commercial experience in web application development, e-commerce platforms, and internal business systems.
- 6 years of experience managing my own web studio. I understand client business processes, can build direct communication, form teams, and organize development processes.
- Specialize in designing architecture from scratch, optimizing high-load systems, developing integrations, auditing performance and security, as well as modernizing and supporting legacy projects.
- Deliver full-cycle projects, where I take responsibility for design, development, integrations, infrastructure setup, and system launch.
- Have practical experience working as a developer, technical lead, and solutions architect.

SKILLS AND TECHNOLOGIES

- PHP, Laravel, Magento, Python, architecture design, high-load systems, REST API, integrations with third-party services, MySQL, PostgreSQL.
- Kafka, Redis, ClickHouse, Docker, Jenkins, CI/CD, Linux, Git, Yandex Cloud.
- WordPress, Drupal. Frontend: CSS, JavaScript, Laravel Livewire.

PROJECT EXPERIENCE

HeadMage (03/2018 - 01/2024)

Founder / Technical Director

Own web studio specializing in the development of e-commerce platforms, CRM systems, and internal business systems on Laravel and Magento.

- Designed the architecture of e-commerce platforms, CRM systems, and integration solutions for Russian and foreign clients.
- Managed the full project implementation cycle: from estimation and planning to launch and further support.
- Developed and evolved high-load solutions in e-commerce, business process automation, and data processing.
- Organized development, quality control, and release processes using Jenkins and CI/CD.
- Participated in negotiations with clients, helped define technical requirements, and choose optimal architectural solutions.
- Built and developed a team of developers, conducted code reviews and technical interviews.

SBIS / Saby (09/2024 - 09/2025)Department Manager /
Lead Python Developer

Development of a platform for searching, processing, and analyzing data about companies and owners.

- Managed a development department and participated in making technical decisions for platform development.
- Developed and maintained functionality for searching, filtering, and processing large volumes of data about companies and owners.
- Introduced the practice of writing automated tests and using TDD to improve development quality.
- Optimized business logic and SQL queries, improving system performance when working with large volumes of data.
- Prepared and decomposed tasks, conducted code reviews, and participated in improving development processes.
- Main focus of work — test automation, performance optimization, and development of the data processing platform.

TopGo (06/2024 - 08/2024)Lead PHP Developer /
Microservices Architect

Project: courier delivery aggregator with a microservice architecture and high load on the notification system.

- Designed and implemented a fault-tolerant notification microservice with support for multiple message delivery channels.
- Implemented Kafka for fast and uninterrupted delivery of notifications to couriers.
- Integrated ClickHouse into the system for storing analytical data, logs, and action history.
- Configured CI/CD processes for automated build and deployment in the Yandex Cloud infrastructure.
- Participated in the integration of new system components and the design of solution architecture.
- Coordinated technical interaction with external contractors on development and testing.

ThriveMarket (09/2016 - 03/2021)

Lead PHP Developer

Large e-commerce platform for selling organic products using a subscription model.

- Integrated the Kafka queue system into the Magento ecosystem to ensure fault tolerance and platform scalability.
- Designed and implemented an automatic recurring product delivery system for the subscription business model.
- Developed and maintained integrations with payment, logistics, and marketing services, including Braintree, DHL, and Sailthru.
- Worked with complex subscription logic, payments, and large volumes of data in a high-load e-commerce project.
- Participated in REST API development and coverage of business logic with automated tests.

Magento-based marketplace for flower product sellers.

- Developed and evolved the seller account area, including product catalog management and order processing.
- Optimized seller workflows by implementing asynchronous data processing and queues.
- Extended the logic of price rules, promotions, and coupons for a high-load e-commerce platform.
- Integrated the Stripe payment system and related services.
- Participated in the development of a multi-domain platform allowing sellers to work both through the marketplace and through their own websites.

Early Experience (2011 - 2014)

- **AIS** — Lead Developer / Development Manager. Managed a team, participated in communication with clients, developed a WordPress-based website builder, and developed a lead monitoring system on CodeIgniter and MongoDB.
- **Freelance (oDesk / Upwork)** — developed Magento e-commerce stores and Drupal content projects for foreign clients.
- **WEXO** — Magento Developer. Full-stack development of e-commerce stores, support of internal modules, payment module for one of the banks in Denmark.
- **Qliff** — Magento / Drupal Developer. E-commerce and content projects, food delivery service, migration of a project from Drupal 6 to Drupal 7.
- **FSSP** — System Administrator / Developer. Infrastructure and DBMS support, development of an internal system for searching information about debtors and an integration service with Rostelecom.

EDUCATION AND LANGUAGES

- Omsk State University (Information Technology)
- Omsk Industrial and Economic College (Information Technology)
- English: B1/B2 - reading technical documentation, business correspondence, participation in work calls.
